

SUSTAINABLE SOURCING OF RAW MATERIALS

OUR GOAL IS TO CONTINUE
PROMOTING RESPONSIBLE
SOURCING THROUGHOUT THE
VALUE CHAIN TO HELP REDUCE
SOCIO-ENVIRONMENTAL IMPACTS.

To mitigate risks such as deforestation and human rights violations, we strive to ensure that every link in the supply chain adheres to ethical principles, respects the rights of workers and communities, and promotes the conservation of natural resources.

Our Global Agriculture Policy reaffirms our commitment to supporting and promoting sustainable agricultural practices aimed at soil conservation and the efficient use of resources. Its objectives include strengthening economic, environmental, and social resilience, as well as ensuring the traceability of key raw materials, with a focus on prioritizing critical ingredients based on their environmental and social impact.

SUSTAINABLE PROCUREMENT

At Grupo Bimbo, we have a Supplier Code of Conduct that sets ethical, social, and environmental standards. It guides our business relationships and promotes responsible practices. In addition, we conduct sustainability awareness sessions for leaders in key categories, aligning the supply chain with our values.

PALM OIL

Our approach to sustainable palm oil sourcing is based on traceability, monitoring, and collaboration with suppliers to ensure deforestation-free supply chains. Using satellite tools such as Starling, we verify areas of origin and strengthen evidence-based actions. We complement these efforts with supplier training and evaluation, the implementation of on-the-ground transformation initiatives, and compliance with international standards such as the RSPO, from which we source 100% of our certified volume under the Book & Claim and Mass Balance schemes. Additionally, we continue to promote projects aimed at strengthening the productive and economic capacities of local communities in key regions.

FOUNDATIONS

SOY

For soy, our focus is on strengthening supply chain traceability and transparency, even though the industry faces challenges regarding the availability of information at the farm level. We maintain constant monitoring of regions of origin and drive improvements through our participation in the Consumer Goods Forum's Forest Positive Coalition, where we collaborate to accelerate the adoption of common standards. With a long-term strategy, we continue to work with suppliers to align expectations, promote responsible practices, and incorporate control mechanisms that enable the development of a more robust traceability system.

SUGAR

In our sugar supply chain, we are driving social transformation by collaborating directly with sugarmills and farming communities. Throughout 2025, we conducted an in-depth analysis of labor practices through interviews and on-site assessments, which enabled us to develop and formalize responsible recruitment procedures. These include clear processes for selecting and appointing foremen and supervisors, ensuring transparency, proper documentation, and compliance with our human rights standards. This approach of active listening and joint development will allow us to scale these lessons to other sugar mills and strengthen worker protection throughout the supply chain.

PAPER AND CARDBOARD

For paper and cardboard, we work to eliminate deforestation risks by prioritizing recycled and/or certified materials, while establishing a rigorous supplier evaluation process. Over the past three years, we have updated 90% of our suppliers and achieved nearly 99% compliance with sustainability criteria, integrating these validations as an essential part of our due diligence in procurement processes. This approach allows us to accelerate the transition toward materials that meet specific certification criteria or contain recycled content, without compromising the business's profitability.
